Launch the Autocad 2013 program. Select Autocad and start Autocad 2013. Create your new drawings with the printer ready to be printed. Go to "File/Exit" Under "Choose where you want to save the file" select the folder where you want to save the file (it is easier to share your files if they are all in the same folder) You can also select the file type, the location and the name. The resolution of the file should be 2400 dpi for A4 and 2400 dpi for A3 Fill in the title you want on the first page and press "save as" The file will be saved in the following location: C:\Users\user\Documents\Autodesk\Autocad 2013\models\myname.dwg In the properties of the myname.dwg file, change the "File Type" to "AutoCAD DWG/DWF 2013" Now you can print the file (the printer will not print a file that is not in the dautocad 2013 format) The files created are 16 pages A4 (17"x11"). It has the same effect as right-clicking the start button of the Autocad program, except that the keygen (tool) allows you to select the printer that you want to use. So if you have a number of printers, you can create a number of keygens for each printer. You can also create a keygen for "A4/A3", in this case all your drawings will be "A4" or "A3". For some printers (the HP printer), you can select the paper size as well, in this case your drawings will be "A4" or "A3", but the printer will print at the current paper size, not the paper size that you selected for your drawings. For some printers (the HP printer), you can also specify whether the pages should be numbered. To change the name of the file created, go to "file/exit" and change the name. This
